High speed rails require greater infrastructure than the traditional trains and thus require larger investment. Lack of essential infrastructure owing to excessive costs pose a threat to this market growth across the globe. Lack of capital in few economies that include Columbia, Brazil, Malaysia, and Argentina will further hinder the industry growth as new projects get delayed owing to lack of funds.

Active participation and heavy investments by government in new railway projects will increase the production of high speed trains at a higher rate. They ensure an operating speed of approximately 200 km/hr, and provides the passengers with enhanced service. Demand of high speed railways is rising owing to their vital role in any country’s transportation system. They minimize the energy consumption levels and are environment friendly. Moreover, they enhance business productivity by providing practical alternative for domestic transportation by lowering traffic congestion.

Leather can withstand daily rigorous transportation of numerous passengers. Moreover, it is affordable and attractive simultaneously. Vinyl is another material that is used instead of leather owing to less cost and three-fold durability.

This investment aims to increase the overall production of rails, improvised seating capacity, and enhanced passenger seating and travelling experience. Thus, manufacturers are focusing on providing the passengers with seats that are featured with resistance to any external damage, light weight and high comfort level.

High speed rails are anticipated to showcase highest growth rate over the forecast timespan owing to numerous announcement of high speed rail projects in various economies across the globe. Rising demand of economic and fast transportation alternatives has further fueled this segment's growth.

North America is anticipated to showcase significant growth rate during the forecast period owing to announcements of numerous metro, monorail, and light-train projects in various economies.

Market players include Magna International Inc., USSC group, Camira Fabrics, Freedman Seating Co., Harita, Saira, Transcal Ltd., Sears Manufacturing Company, The C.E. White Co., Seats Incorporated, Fenix Group, Fainsa, Horiba Mira Ltd., Kustom Seating Unlimited Inc., Rescroft Ltd., and Ulrich Seats Ltd.

Manufacturers are focusing on developing innovative seating solutions to provide the customers with high comfort level. For instance, in December 2014, Bay Area Rapid Transit (BART) replaced woolen train seats with vinyl as they are more comfortable and cost effective than leather.
